HIV has reached every corner of the globe although some regions are more heavily affected than others. The vast majority of people living with HIV live in sub-Saharan Africa.

The scale of the epidemic has demanded substantial political and financial commitment from international organisations, donor countries and domestic governments.

Here, we give you the latest global statistics, an overview of the global HIV response to date, and identify the major trends in the different regions and countries.

Global response to HIV and AIDS

In recent years, the international community has made huge efforts to provide universal access to HIV prevention and treatment.

History of HIV and AIDS

The history of HIV spans almost 100 years, since its origin in the 1920s.
Access information and statistics about the HIV epidemic across East and Southern Africa and within individual countries.
