Harm reduction programming

As the global response to the HIV epidemic has developed it's clear that a combination of targeted prevention programming is needed to stabilise and reduce the number of new infections.

Harm reduction has gained more traction with policy- and programme makers in recent years, but coverage where it's most needed is severely lacking.

In this section, we discuss some of the the main harm reduction initiatives including opioid substitution therapy and needle and syringe programmes, and what the future holds.

Harm reduction for HIV prevention

Harm reduction initiatives such as opioid substitution therapy reduce the risk of HIV among people who inject drugs.

Opioid substitution therapy (OST) for HIV prevention

Opioid subsitution therapy programmes are delivered in a number of ways including primary care, specialist clinics, pharmacies and 'take home' OST.

Needle and syringe programmes (NSPs) for HIV prevention

Needle and syringe programmes are delivered in a number of ways including fixed sites, vending machines and at pharmacies.
